DETAILED ACTION

1. The drawings are objected to because the point switching device, as shown in Figures 1(4) and 2A, is not legible. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 3617

3. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Gill (US 1,548,940).

Gill discloses a point switching device having all features as recited in the instant claims, including a point adapted to be movable between first and second positions by rotating about support point 24, first and second coils 37,38 for driving the point to the first and second positions, respectively, and excitation control unit 42 having a switching device as shown in Figure 5 of Gill for selectively supplying an intermittent current to the first or second coil.

As to the instant claimed point position display unit, as recited in instant claim 3, consider the unit on the left side of Figure 2 of Gill, and lines 90-99 of Gill.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 3617

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gill (US 1,548,940) in view of Hussein (US 4,223,857).

Gill is applied above.

Regarding the instant claimed electricity supply unit being in the form of a battery, as recited in instant claim 2, it is noted that electricity supply units in the form of batteries are well known. Note for example, the first four lines, column 3 of Hussein. Therefore, it would have been obvious to one skilled in the art to use batteries, such as that suggested in Hussein, as the power source for operating the structure of Gill.
